

Link Protect

The *Link Protect* service offers failover protection for your most important communication asset, your internet service. *Link Protect* provides your business with real-time fibre, copper or wireless link redundancy to allow your business to continue to operate.

Real Time Failure Mitigation

Failures do occur in communications infrastructure and one of the best ways to mitigate the loss of productivity is to have a second link.

Link Protect can provide link redundancy using multiple technologies and multiple carrier networks including:

- NBN / NBN
- Fibre / Mobile Broadband
- Fibre / NBN
- Fibre / Fibre
- NBN / Mobile Broadband
- And WiMAX

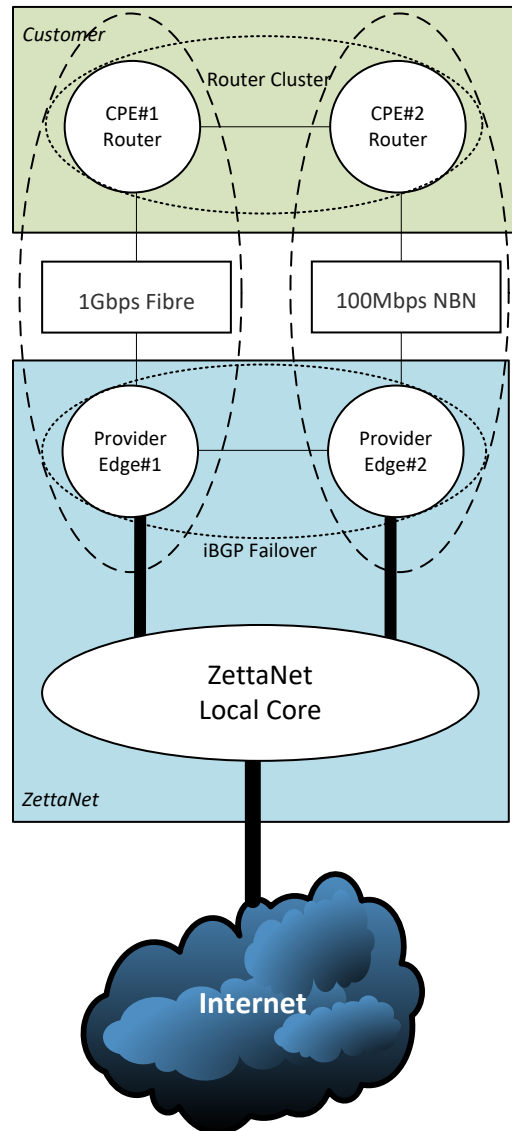

Works with other providers

Even if you have a primary link with ZettaNet and a secondary link with another provider, we can enable *Link Protect* to allow automated failover between these connections via a VPN tunnel.
